

SUN MOON AND STARS

The solar system consists of the Sun and planets that travel around the Sun. The Sun is shaped like a ball. The Sun, a huge glowing sphere of hot gases is at the centre.

The eight planets are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.

We live on the Planet Earth. The movement of the Earth around the Sun causes Seasons.

Thank You Planet Earth.

Do you wish to go to space one day?
